### **Official Take Over for Lakeside Energy from Waste plant in London**

Lakeside Energy from Waste Ltd – the joint venture between Grundon Waste Management and Viridor – has announced that as part of a phased commissioning programme, Take Over of the plant [on 15<sup>th</sup> January 2010](#) has been achieved.

The Take Over follows a successful demonstration of operability over a trial period involving waste combustion, energy generation and connection to the National Grid.

There will now be a staggered inspection shutdown of the plant over eight days. This will be followed by 60 days of performance trials to demonstrate the reliability of the facility and test various contract performance parameters.

The award winning plant close to Heathrow Airport in London has a design throughput of 410,000 tons per year and is capable of generating up to 37 MW of power – enough to provide the domestic power needs of 64,500 households.
